TEACHING	Instructor	
EXPERIENCE	• Online master (working professionals) core: Text Mining	Summer 2024
	- Teaching evaluation: 9.00/10 (school norm: 9.04/10)	
	Master core: Text Mining	Spring 2024
	- Teaching evaluation: 9.67/10 (school norm: 8.93/10)	
	• Master core: Prescriptive Analytics	Fall 2023
	- Teaching evaluation: $9.33/10$ (school norm: $9.10/10)$	
	Teaching Assistant	
	• Ph.D. core: AI & Machine Learning for Business Applications	Fall 2023
HONORS AND AWARDS	• Honorable Mention and Finalist, MSOM Student Paper Compe	tition 2023
	\bullet First-Class Excellence Scholarship, Tsinghua University	2022
PROFESSIONAL SERVICES	• Session Chair, 2024 INFORMS Annual Meeting	2024
	\bullet Reviewer, Manufacturing & Service Operations Management	2024
	\bullet Judge, INFORMS BOM Best Working Paper Competition	2023
	\bullet Session Chair, 2023 China India Insights Conference	2023
CONFERENCE PRESENTATIONS	1	
	• INFORMS Annual Meeting, Phoenix, USA	2023
	• China India Insights Conference, Stanford, USA	2023
	• INFORMS Annual Meeting, Virtual Conference	2021
	"The Value of Customer-Related Information on Service Platforms: Evidence from a Large Field Experiment"	
	• Seminar at Imperial College Business School, London, UK	2022
	• MSOM Conference, Virtual Conference	2021
	"The Impact of Recommendations on Consumption and Creation on Online Content-Sharing Platforms"	
	• 34th Annual POMS Conference, Minneapolis, USA	2024
	• CSAMSE Conference, Shenzhen, China	2023
INDUSTRY EXPERIENCE	• Data Analyst Intern, Kwai	2018-2023
	• Data Analyst Intern, DiDi Chuxing	2017-2018
	• Business Analyst Intern, Amazon	2017
SKILLS	Programming Languages: Python, R, SQL, C/C++, HTML, LATE	Σ X

ABSTRACT OF THE JOB MARKET PAPER

The Impact of Recommender Systems on Content Consumption and Production: Evidence from Field Experiments and Structural Modeling

Online content-sharing platforms such as TikTok and Facebook have become integral to daily life, leveraging complex algorithms to recommend user-generated content (UGC) to other users. While prior research and industry efforts have primarily focused on designing recommender systems to enhance users' content consumption, the impact of recommender systems on content production remains understudied. To address this gap, I conducted a randomized field experiment on one of the world's largest video-sharing platforms. The experiment manipulated the algorithm's recommendation of creators based on their popularity, excluding a subset of highly popular creators' content from being recommended to the treatment group. The experimental results indicate that recommending content from less popular creators led to a significant 1.34% decrease in video-watching time but a significant 2.71% increase in the number of videos uploaded by treated users. This highlights a critical trade-off in designing recommender systems: popular creator recommendations boost consumption but reduce production. To optimize recommendations, I developed a structural model wherein users' choices between content consumption and production are inversely affected by recommended creators' popularity. Counterfactual analyses based on the structural model reveal that the optimal strategy often involves recommending the content from less popular creators to enhance production, challenging current industry practices. Thus, a balanced approach in designing recommender systems is essential to simultaneously foster content consumption and production.
